

Y. Tabov, M. Dobрева

Computer Technologies and the Cultural-historical Inheritance

(Summary)

The authors show the relatively new scientific research sphere of computerization, its essentiality and the advantages it gives the modern researchers from different spheres of science. The authors also give comments on the problems pointed out on the specialized session “New Technologies in the Field of the Cultural-historical Inheritance” (that took place in the framework of the Thirty-third Spring Conference of the Bulgarian Mathematical Society), which is tightly connected to the main subject of the presentation. They also apply bibliographic information in order to be used in full length.
